

Description

Previous software-based copy protection systems were much less flexible: the application was either on the 'correct' machine or it was not. If there were any problems, the software just stopped: not good for customer relations.

CopyMinder is much more subtle, flexible and intelligent so it provides even stronger security without hassle for you or your customers.

Although internet access is not necessary for CopyMinder to provide protection, it does enable it to be much more flexible. CopyMinder is effectively keeping an eye on each installation of your software. By careful monitoring, it is able to decide which customers to trust and which to be wary of. It therefore acts like you would: it is accommodating to those users that it considers trustworthy but intolerant of those that appear to be trying to rip you off.

Key Features

Below are some of the many features CopyMinder offers:

- Ultra-secure protection of your software.
- Hassle free.
- Flexible.
- Internet based (but also works without the internet if required).
- Customisable protection via a web-based interface
- Shell and API protection methods for ultimate flexibility.
- Supports standalone and network based programs
- Powerful anti-debug code
- Inexpensive.
- Free, fast support via email or phone.

Supported Operating Systems

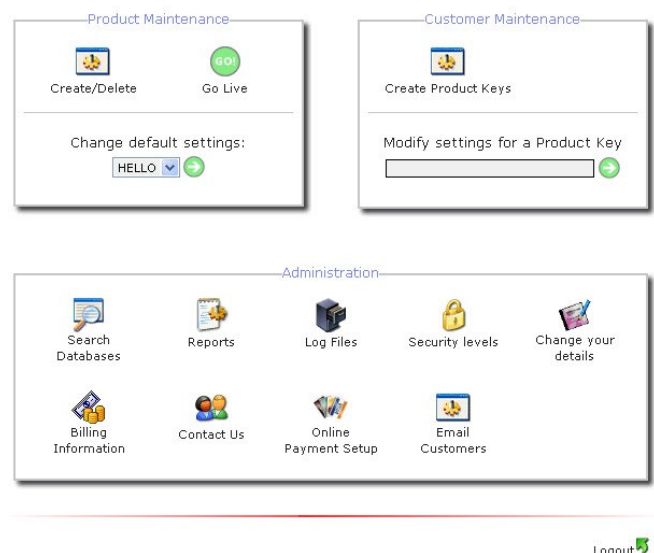

- All Windows version (95 onwards, including Vista and x64)
- Linux

Software Developers Kit (SDK)

The CopyMinder SDK allows you to add the protection to your software. Also included with the SDK are:
