

Dinkey Pro Lite

Dinkey Pro Lite dongles provide you with a simple, secure and inexpensive way to protect your software.

Feature List

- 1) No need to install drivers (it uses built-in drivers in Windows).
- 2) The Dinkey Pro hardware is based on proven, very secure smart card technology as used throughout the security industry.
- 3) All communication with the Dinkey Pro dongle uses very strong encryption techniques – a mixture of RSA encryption and strong 128-bit encryption. Using RSA encryption means that even if a hacker discovered the public key our software then they could not work out the private key in the dongle. This means it is not possible to emulate the hardware dongle.
- 4) Many techniques to improve the security between your code and our code. This is lacking in many dongle systems but it is often the weakest part of the protection system.
- 5) Strong anti-debug code – a hallmark of all our software protection systems.
- 6) Dinkey Pro Lite dongles contain a Product Code (specified when you order) so that you can distinguish one protected product from another.
- 7) Each dongle contains a unique serial number.

Supported Operating Systems

- All Windows version (98 onwards, including Windows 7 but excluding CE and Pocket PC)

Technical Specifications

- **Interface:** USB 1.1 +
- **Data retention:** >10 years
- **Operating Temperature:** 0°C to 70°C
- **Weight:** 5 grammes
- **Dimensions:** 50mm x 15.5mm x 7.5mm

Software Developers Kit (SDK)

The Dinkey Pro SDK allows you to add the protection to your software and program the dongles. Also included with the SDK are:

- Free software upgrades for life
- Technical support via email and telephone
- Sample code for all the major programming languages

Ordering and Prices

When you place your first order you'll need the Pro SDK for a one off payment of £95. The Dinkey Pro Lite dongle prices start at just **£9**.
